

Vishwanth Marri

marrivishwanth06@gmail.com | +1 (513) 348-0777 | Dallas, TX | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Profile Summary

Software Engineer with 3+ years of experience building scalable full-stack applications and AI-powered solutions across the SDLC. Skilled in Python, TypeScript, React, FastAPI, REST APIs, LLMs, RAG, and Generative AI, with hands-on experience in LangChain, Claude API, prompt engineering, and AI agent workflows. Experienced in owning features end-to-end, collaborating with cross-functional teams, and delivering production-ready solutions in Agile environments.

Technical Skills

Frontend Engineering: React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, Responsive UI Development, Component-Based Architecture

Backend Engineering & APIs: Python, FastAPI, Node.js, Express.js, Java, RESTful APIs, GraphQL, API Development, OAuth 2.0, JWT, Asynchronous Processing, Microservices

AI, Generative AI: Large Language Models (LLMs), Claude API, LangChain, LangGraph, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), Vector Search, AI Agents, Agent Orchestration, Prompt Engineering, LLM Evaluation, Structured Outputs

Databases & Data Technologies: SQL, PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch, pgvector, Database Design, Query Optimization, Data Modeling, Vector Databases

Cloud, DevOps & Infrastructure: AWS (EC2, S3, RDS, Lambda), Docker, Kubernetes, Terraform, GitHub Actions, CI/CD, Cloud Deployment, Infrastructure as Code (IaC), Containerization

Testing, Quality & Observability: Pytest, Jest, Unit Testing, Integration Testing, API Testing, Test Automation, Debugging, Code Review, Structured Logging, Application Monitoring, Performance Optimization

AI-Assisted Development: Claude Code, Cursor, GitHub Copilot, AI-Assisted Coding, Developer Productivity, Automated Workflows

Professional Experience

Software Engineer, Salesforce

01/2026 – Present | Dallas, USA

- Developed scalable CRM automation and onboarding platforms using Python, RESTful APIs, and OAuth 2.0, engineered webhook workflows for bi-directional data synchronization, reducing sync errors by 90% across enterprise systems.
- Automated customer onboarding and data processing workflows by integrating Generative AI with Python and FastAPI backends, reducing manual effort and significantly improving operational efficiency.
- Engineered AI-enabled React/TypeScript interfaces for automated onboarding workflows, using lazy loading, code splitting, and reusable UI components to optimize bundles and reduce frontend load times by 40%.
- Implemented secure API and application access controls using JWT authentication and Role-Based Access Control (RBAC), protecting customer and enterprise data while providing controlled access across backend services and user workflows.

Software Engineer Intern, Kontaktsource

08/2025 – 12/2025 | Miami, USA

- Developed internal data-validation tools using Node.js and FastAPI to validate member application data before manual review, improving data quality and reducing incorrect entries flagged by the operations team by ~20%.
- Engineered scalable backend APIs and enhanced React-based frontend workflows for core membership, application, and event management systems, improving UI consistency and accessibility across member-facing applications.
- Conducted root-cause analysis and backend debugging to eliminate recurring form-submission and data-entry defects, documenting standard fixes to streamline ongoing operational support and accelerate team issue resolution.
- Supported backend API integration work by writing validation scripts, testing webhook payloads, and documenting data-flow behavior — contributing to the reliability of the broader CRM automation layer.

Full Stack Developer, Virtusa

06/2022 – 07/2024 | Hyderabad, India

- Enhanced a multi-tenant client operations platform using the MERN stack to centralize customer workflows, automate manual processing, and support isolated tenant-specific data and business processes, reducing overall client processing time.
- Engineered resilient Node.js and Express.js backend services, integrating external enterprise APIs with structured error handling, retries, and asynchronous processing to ensure reliable data exchange under variable network conditions.
- Containerized services with Docker and automated AWS EC2 deployments via GitHub Actions CI/CD pipelines, cutting release cycles by 35% and standardizing workflows.
- Optimized PostgreSQL data-access performance through targeted indexing, query optimization, and Redis caching strategies, reducing average API response times and improving application responsiveness for high-volume workflows.
- Developed comprehensive unit and integration test suites across full-stack components, APIs, and data layers, achieving high code coverage and preventing critical defects prior to production deployment.

Education

Master of Engineering in Computer Science, University of Cincinnati

08/2024 – 05/2026 | Cincinnati, OH

Projects

AI-Powered Document Q&A System | FastAPI, pgvector, LangChain, Claude API, MCP, TypeScript, React

- Built and deployed a production document Q&A platform with two-stage retrieval (pgvector ANN search + Voyage AI reranking), LangChain orchestration with MCP tool use, and real-time Claude API streaming via Server-Sent Events -- users upload PDFs and receive accurate, cited answers instantly
- Diagnosed and resolved a race condition causing silent data corruption under concurrent load by tracing through structured logs and implementing an idempotent async job queue, maintaining sub-200ms retrieval latency.
